

Packers

Flexible solutions when it comes to sewer renovation

These packers consist of a rubber body which is provided with a flange on which a double set of wheels is mounted on either side. The wheels are retractable and can be easily adapted to the size of the pipe.

A strong connection between the inner flange and outer flange prevents loosening of the body. The flexible design of the packer can easily go through a manhole and be installed in the damaged pipe.

The packers are suitable for pipe sizes from 200 up to 1200 mm and are available in various lengths. On request, the packers can be equipped with a bypass.

Optionally, a bypass is possible.

Packers marked with *: delay 8-10 weeks.
